What to back up	Entire machine ▼		
Continuous data protection (CDP)			
Items to protect continuously	Applications: Acrobat Distiller, Adobe Acrobat DC + 39 more		
Where to back up	Cloud storage		
Schedule	Monday to Friday at 10:15 PM ⓘ		

ADVANCED CYBER SECURITY

(MALWARE, RANSOMWARE, EXPLOIT, ETC. PROTECTION)

AI-POWERED, NEXT GEN CYBER PROTECTION

Next gen, behavior-based technology built to proactively stop cyberthreats, with a focus on Ransomware and zero-day attacks

Full-stack Anti-Malware protection: Real-time protection covering all attack vectors with multiple defense layers

Vulnerability assessment & Data loss prevention (DLP) with device control

URL filtering: Block malicious URLs, web-based attacks, and COVID-19 scams

Exploit prevention: Behavior-based detection heuristics prevent the exploitation of unknown vulnerabilities, including memory exploits and injections

Anti-malware scans of data in the Acronis Cloud: Offload client endpoints to enable more aggressive scans and ensure malware-free backups

CPOC threat feed: Increase reactivity to emerging threats and get remediation suggestions

Automatic allowlisting: Reduce false positives and enable more aggressive scanning

Malware reinfection prevention: Scan for malware and update AV definitions during recovery to prevent a threat from reoccurring

EMAIL SECURITY

(POWERFUL EMAIL SECURITY TO SAFEGUARD YOUR BUSINESS)

AI-POWERED, NEXT GEN EMAIL SECURITY

Eliminate spam email before it reaches your network with our proprietary, predictive, self-learning technology that has a nearly 100% filtering accuracy rate.

AI based system continuously collects and analyzes data to predict and instantly identify new spam outbreaks. This accumulated intelligence is shared real-time with all clients worldwide, ensuring timely protection against new threats.

Increased email continuity - When your email server is unreachable, our system allows you full access (read, compose, reply) to the emails stored in our queue until your email server is back online. This provides an uninterrupted email flow and increased email continuity, helping prevent email from being lost or bounced back to the sender.

Protect your IP and company reputation: Our system helps to secure your IP ranges against blacklisting by filtering outgoing spam, viruses, phishing, malware, ransomware and other email-based threats. Blacklisting prevention helps to secure your company's reputation as well.

Ensure continuous email delivery: Add a layer of outgoing email continuity to help ensure delivery of your outbound email to the intended recipients.

PASSWORD SECURITY

(ACROSS MULTIPLE DEVICES - POWERED BY LASTPASS)

EFFORTLESS PASSWORD SECURITY FOR EVERYONE

Frictionless experience - Simple & easy to use password manager to improve password hygiene and personal / company security posture.

Convenient password sharing - Secure & flexible sharing for collaborative teams - from IT to marketing groups - while maintaining accountability.

Highly Secure with MFA support - With multiple layers of security available (master password, MFA, etc., all your passwords are accessible by only you across all of your authorized devices.

Dark Web Monitoring - Stop worrying about data breaches. LastPass monitors all the accounts & sends an alert if information is compromised to keep your accounts safe.

Extremely easy to use - Save your passwords once and LastPass will make it available on all the authorised devices. LastPass browser extension also allows you to auto-fill existing passwords, auto-generate new passwords or auto-update updated passwords with a click of button!

Free family accounts - With each business account, you get up to 5 LastPass family accounts that you can share with friends or family members to ensure that they remain secure too. One business account gives you access to up to 6 accounts!

VPN FOR SAFE BROWSING

(DON'T LET HACKERS HAVE ACCESS TO YOUR ACTUAL DEVICE)

ENHANCED SECURITY FOR ALL ONLINE ACTIVITIES

Complete security to hide your private information - When you connect to internet through VPN, all of your information is masked from hackers & all traffic is encrypted. This ensures that your data & information remains completely safe from hackers.

Security for remote workforce - Your remote employees can work from anywhere and connect to the VPN to ensure that they are all in same private network from across the globe.

Limit access to secure company portals - You can limit access to secure portals/applications to private VPN IP address to ensure that your workforce must be connected to the VPN to be able access company information/data.

Access to Geo-blocked services - When you are connected to a VPN IP, you will have access to Geo-blocked content that may not be available in your region but is available in region when your VPN is located.

Multiple locations - You have flexibility to choose from multiple locations (up to 13 global locations) so that your workforce experiences lowest latency when they work.
